GLIMPSES OF THE PROGRAM

Green Corridor

- It Can reduce the total transfer time by 60-70%
- As per the latest government statistics, 17 people die each day waiting for an organ transplant.
- There are two main reasons for this:
 - The hesitation of people to donate their organs
 - Lack of provisions to deliver organs to the patient's destination
- There is only a time duration of four hours between which the harvesting and transplant of the organ must be done.
- In small cities and towns, this target can still be achieved, but in cities like Mumbai, Bangalore, Delhi, etc., which are busy on roads, may not be able to fulfil this requirement.
- Thus, with a Green Corridor in every city, a lot of time can be saved in transferring the organ to the destination via traffic-free routes for the ambulance.

Evolution of brain death

In 1959, a group of neurosurgeons from Lyons, France described **death of nervous system characterized by**

- severe neurotrauma
- persistent apneic coma
- absent brainstem reflexes
- electrically silent brain

These patients are characterised by

- Cadaveric appearance
- Regular heart beat as long as artificial respiration is maintained.
- No respiratory efforts if discontinued
- No response to hypercarbia
